

Growth Promoters

Furazolidone 20% Premix

For Prevention and Control of Subclinical Bacterial Infections

DESCRIPTION

Furazolidone is an antibacterial and antiprotozoal effective against many gram-negative enteric organisms; used in the treatment of diarrhea and enteritis. It is used in poultry as a feed additive to treat bacterial and protozoal intestinal infections.

COMPOSITION

Each Kg contains

Furazolidone	200 gm
--------------	--------

BENEFITS

- An essential Poultry Growth Promoters Products and feed supplement for prevention of diseases and better weight gain.
- Poultry Growth Promoters Products Helps to prevent and overcome intestinal disorders, improves egg production and reduces chick mortality
- Ensures better growth, weight gain and feed conversion

USAGE INSTRUCTIONS

- Routine Inclusion Level
- 250 g per Tonne of feed for chicks, growers, layers, broilers and breeders.
- 7 Days-A-Month Plan
- 500 g per Tonne of feed to be fed for one week in each month to Layers.

OR As recommended by the Nutritionist

PRESENTATION

5 Kg.

Colidoxpro

Anti biotic Growth Promoter
Protection and Growth under one shell

DESCRIPTION

- High levels of bacterial load are scattered in the farm environment. Use of antibiotics in feed has proved to be essential from time to time for improving feed conversion, egg production, weight gain in broilers and control of stress caused by sub clinical bacteria.
- Using only Colistin Sulphate or only Doxycycline may lead to limitation in use due to spectrum of action and the problem of developing resistance. Providing protection and growth under one shell, Colidoxpro overcomes higher bacterial load.
- COLISTIN is unique Peptide Antibiotic effective against gram negative organisms present in Gastrointestinal tract. It accelerates powerful anti-bacterial action against organisms causing enteric infection.
- DOXYCYCLINE in Colidoxpro acts synergistically in extremely small doses to make their use highly cost effective.

Vitamins are essential for the proper operation of many physiological functions.

COMPOSITION

Each Kg Colidoxpro. contains

Colistin Sulphate	2 gm
Doxycycline HCl	10 gm
Base	q.s.

USAGE

Broilers : 500 gms per tonne of feed from day one till marketing Layers

Breeders : 2 kg per tonne of feed a week per month programme or As recommended by poultry nutritionist

PRESENTATION

500 gm, 1 Kg

- It is uniformly blended antibiotic growth promoter to boost the performance.
- RECOMMENDATION
- Better feed conversion hence increased weight gain
- To control & prevent subclinical infections at all stages
- To Control and prevent bacterial diarrhoea
- To prevent uneven & retarded growth
- To Improve liveability
- Safe to use in chicks

Feed Supplements and Veterinary Products

Prodoxy-Neo

NEOMYCIN 2% & DOXYCYCLINE 2%

ANTIBACTERIAL PERFORMANCE ENHANCER

ND-VETFS is a potent antibacterial combination of Neomycin and Doxycycline exerting a broad spectrum of activity against all forms of bacterial infections.

DESCRIPTION

- High levels of bacterial load are scattered in the farm environment. Use of antibiotics in feed has proved to be essential from time to time for improving feed conversion, egg production, weight gain in birds and control of stress caused by sub-clinical bacteria.
- Using only Neomycin or only Doxycycline may lead to limitation in use due to spectrum of action and the problem of developing resistance. Using Neomycin and Doxycycline in combination acts synergistically, has broad spectrum activity and is rapidly absorbed from the intestine to provide quick results.
- NEOMYCIN is a bactericidal and acts locally against a variety of gram-positive and gram-negative bacteria. DOXYCYCLINE acts systemically against a large number of pathogenic bacteria. It is readily absorbed from GI tract than most other tetracyclines.
- exerts dual mode of action destroying pathogens both locally and systemically to ensure antibacterial activity.
- It is a uniformly blended antibiotic growth promoter to enhance the bird's performance.

COMPOSITION

Each Kg contains

Neomycin Sulphate	2 %
Doxycycline	2 %
Excipient	Q.S.

BENEFITS

- Most effective for mixed & Gastrointestinal tract infections.
- Synergistic formulation with broad spectrum activity & dual mode action.
- Controls & prevents infection due to gram - positive & gram - negative organisms.
- Reduces E. Coli & Salmonella incidence.
- Prevents Necrotic Enteritis & CCRD.
- Controls & prevents bacterial diarrhoea.
- Improve feed conversion & overall performance.
- Increased growth, weight gain & egg production.

DOSAGE

- Add at the rate of 200 gms per ton of complete feed for prevention.
- Double the dosage in case of disease outbreak.

PRESENTATION

Pack : 5 Kg. Aluminium Pouch
