

Toxin Binder Special

TB Spl is a multifunctional broadspectrum mycotoxin binder designed to bind the toxins in feed and protect the animals from their ill effects.

DESCRIPTION

TB Spl is a multifunctional broadspectrum mycotoxin binder designed to bind the toxins in feed and protect the animals from their ill effects.

Feed raw material and finished feeds are inevitably contaminated with wide range of moulds and mycotoxins resulting in reduction of quality and palatability of feed. Mycotoxins are a group of chemicals produced by certain fungi when they get a conducive environment. Microbiological contamination with mycotoxins in raw material and finished feed will result in,

- Loss of nutritive value
- Change in physical properties
- Contamination with pathogens
- Poor FCR
- Reduced palatability
- Presence of Mycotoxins
- Poor immune status
- Reduced production

Carefully selected mineral clays along with organic acids are effective in binding toxins and inhibiting Moulds. MOS helps in preventing pathogen population and prevents multiple mycotoxicosis. Activated Charcoal prevents Ochratoxicosis.

COMPOSITION

TB Spl is a synergistic blend of select Hydrated Sodium Calcium Aluminosilicates (HSCAS), yeast cell wall components (MOS - mannanoligosaccharides), activated carbon, organic acids, their salts and surfactants.

BENEFITS

- TB Spl binds a wide range of mycotoxins present in feed- aflatoxins, ochratoxins, trichothecenes, etc.
- TB Spl prevents growth of moulds and bacteria, thus reducing further production of mycotoxins.
- TB Spl supports natural immune defences and helps prevent immunosuppression due to mycotoxins.
- TB Spl selectively binds mycotoxins and spares vitamins, minerals and other nutrients.
- TB Spl has no residual effects or withdrawal periods.
- TB Spl improves animal performance and productivity.
- TB Spl is in dust form which flows easily and gets uniformly mixed in feed.

INCLUSION LEVELS

- TB Spl is recommended at the rate of 1 - 2 Kg per tonne of feed depending upon moisture levels OR as suggested by your animal nutritionist.

APPEARANCE

TB Spl is a brown powder with a moderate to strong pungent odor. Change in colour of the product does not affect its performance.

PRESENTATION
