## Toxin Binder

Positive solution for mycotoxins

### DESCRIPTION

Toxin Binders For Poultry is feed raw material and finished feeds are inevitably contaminated with wide range of moulds and mycotoxins resulting in reduction of quality and palatability of feed. Mycotoxins are a group of chemicals produced by certain fungi when they get a conducive environment.

Microbiological contamination with mycotoxins in raw material and finished feed will result in:

- Loss of nutritive value
- Change in physical properties
- Contamination with pathogens
- Poor FCR
- Reduced palatability
- Presence of Mycotoxins
- Poor immune status
- Reduced production

Carefully selected mineral clays along with organic acids are effective in binding toxins and inhibiting Moulds.

### COMPOSITION

Poultry Toxin Binders is a unique blend of Organic Acids & Hydrated Sodium, Calcium, Alumino silicates.

### STRENGTHS IN T. B.

- Neutralises Aflatoxins (Mycotoxins)
- Selectively binds aflatoxins, B1, B2, G1 & G2 and does not bind vitamins and trace minerals.
- By reduction in pH lowers the growth of bacteria.
- Free Flowing

### BENEFITS IN USING T. B.

- Poultry Toxin Binders for blinding and neutralizing of mycotoxins.
- For inhibition of mold growth
- For Better F.C.R.
- For increased productivity.
- Cost effectiveness.
- T B is uniformly blended to overcome the hazardous effect of mycotoxins.

### FEEDING PROPOSAL

Each 200 gm contains:

Moisture content upto 15% (in normal season)	1.5 to 2 kg. per tonne of feed.
Moisture content above 15% (in rainy season)	2.5 kg. to 3 kg. per tonne of feed.

### PRESENTATIONS:

5 x 5 kgs. in Triple lined bags = 25 kgs.
